- Added New Credits UI
- Added Modern Mojang loading screen
- Fixed Waypoint and AntiPickup saving
- Cleaned up modules and descriptions
- Cleaned up errors and logging Tons of behinds-the-scenes cleanup
- Removed ViaSounds

Controller support:

Press  button to set controller keybinds. Though for sprint set your sprint key to ctrl for it to work.

Resource packs:

There are specially modded resource packs for this version which is in the ConvenientTexturePacks folder. The contents of this folder are

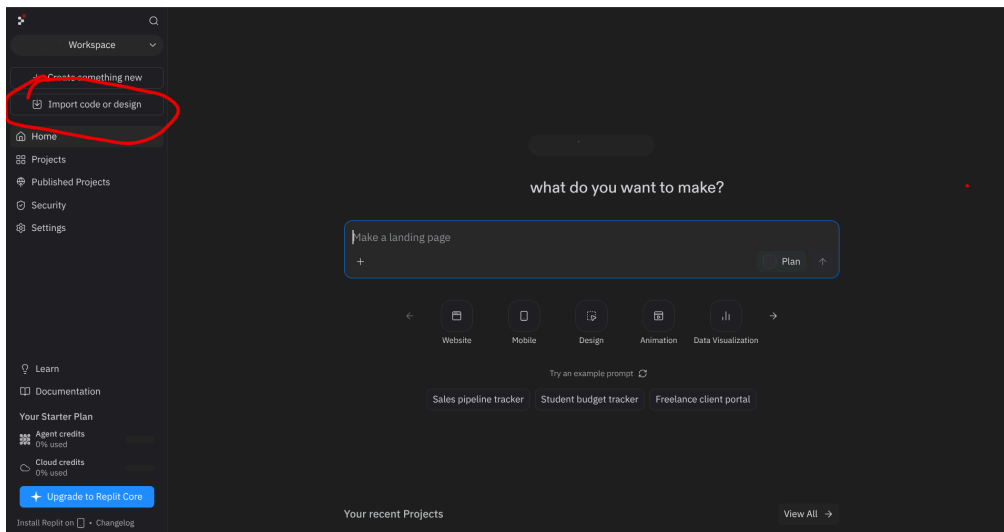

- Transparent GUI
- PvP swords (shortened swords)
- Modernity (adds modern textures to old blocks)
- Default Dark mode
- Borderless Glass
- Colourful Containers dark mode
- Better Clear Glass
- Small fire

Notes:

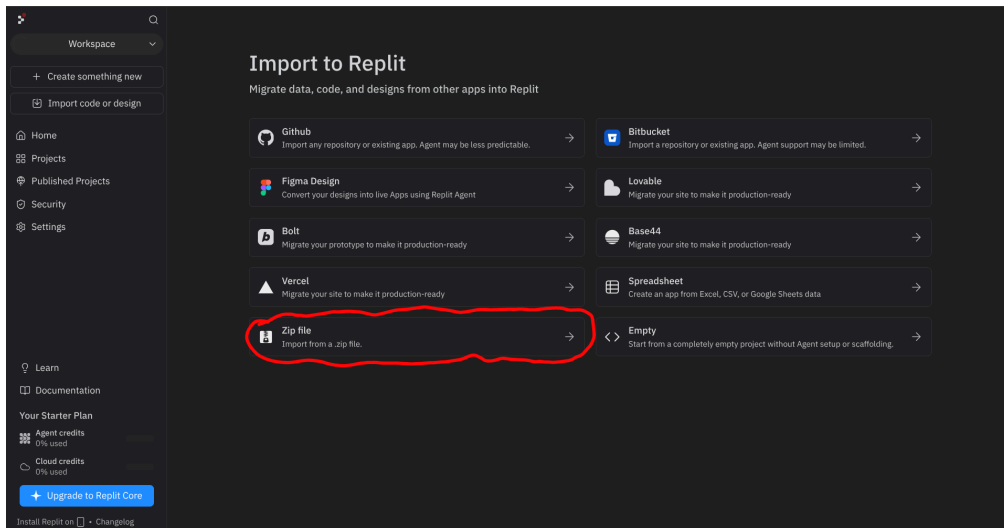

For better FPS turn on Sodium UI. There are advanced options for optimizations there.

Proxy:

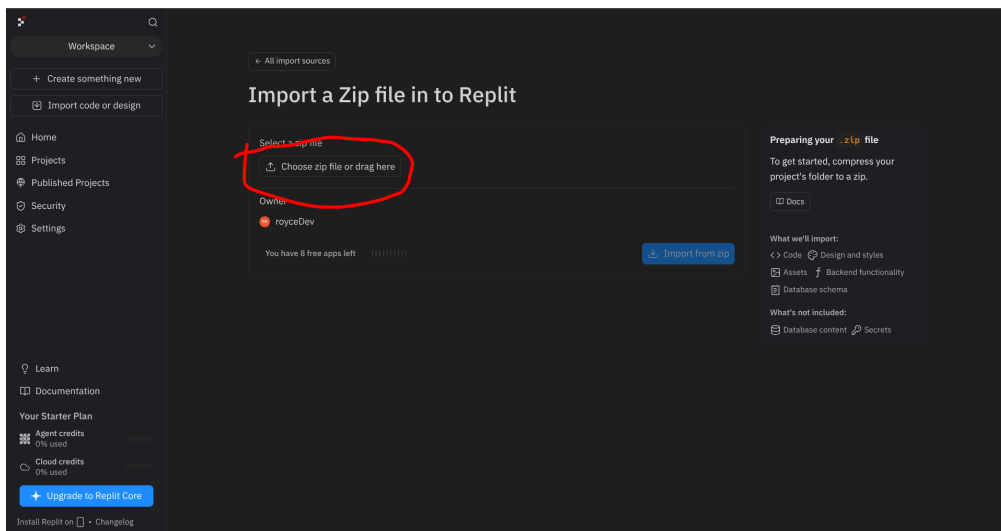

To set up your eaglercraft server proxy simply go to replit.com and go to import code or design, on the top left.

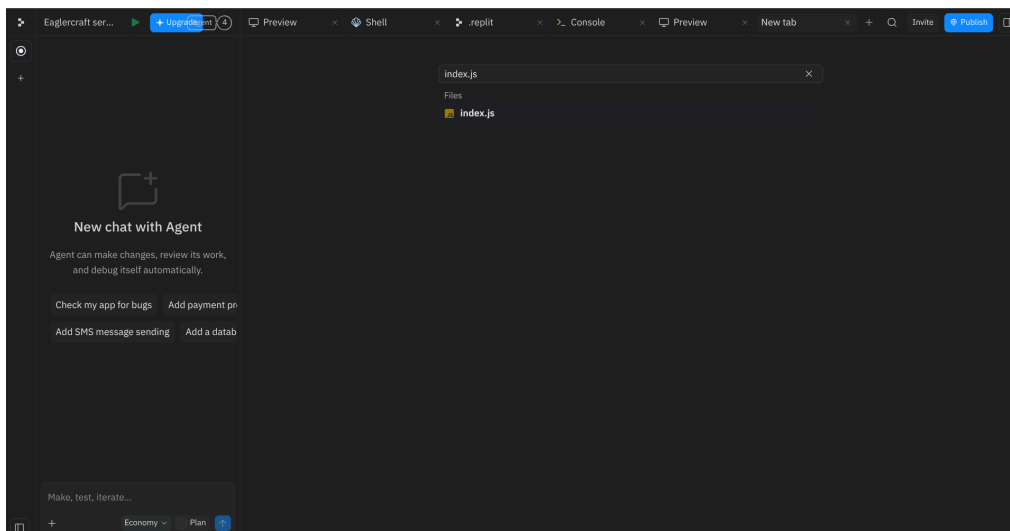

Click the zip file button.

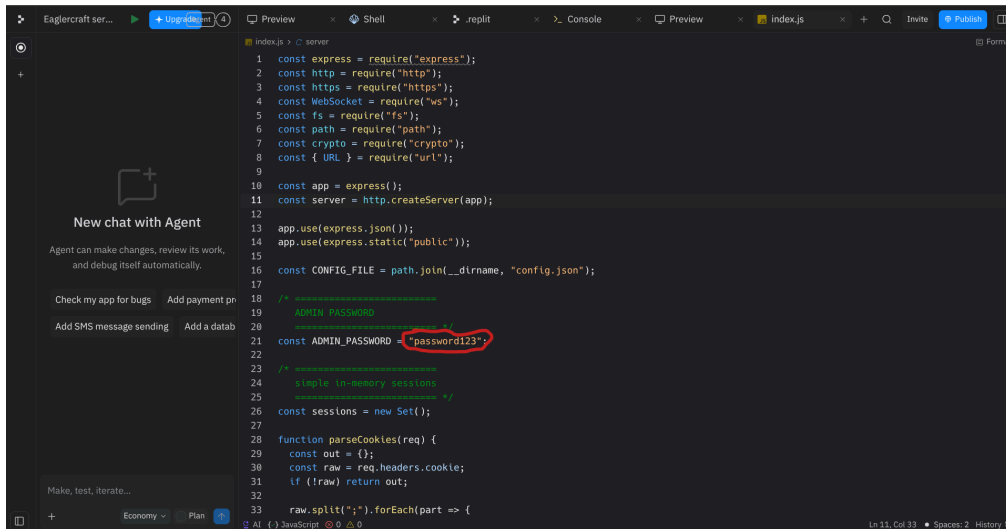

Press Choose zip file or drag here and find the Eaglercraft-server-proxy.zip and select it. Wait for it to create your app and press view. If that doesn't work go back to home or go the replit.com and go to projects and click Eaglercraft-server-proxy.zip in your projects.

Go to a new tab and search index.js and click on it.

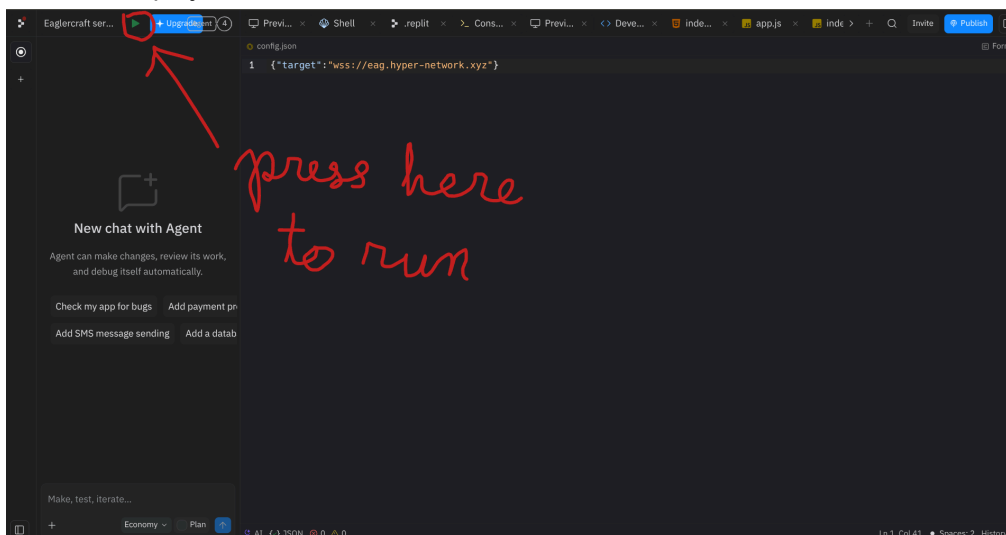

Change this to any password you would like, keep the quotation marks so just put your password in it.

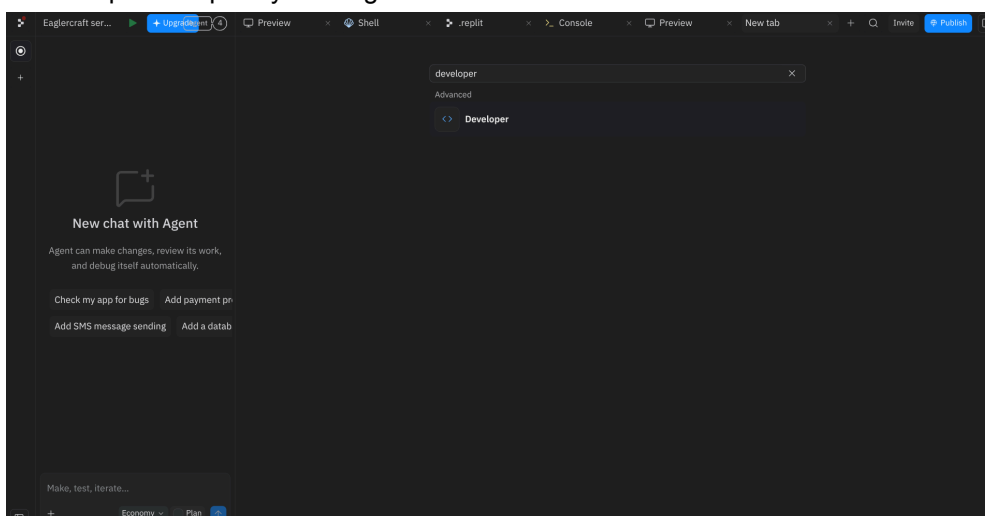

```
1 const express = require("express");
2 const http = require("http");
3 const https = require("https");
4 const WebSocket = require("ws");
5 const fs = require("fs");
6 const path = require("path");
7 const crypto = require("crypto");
8 const { URL } = require("url");
9
10 const app = express();
11 const server = http.createServer(app);
12
13 app.use(express.json());
14 app.use(express.static("public"));
15
16 const CONFIG_FILE = path.join(__dirname, "config.json");
17
18 // =====
19 ADMIN_PASSWORD
20 // =====
21 const ADMIN_PASSWORD = "password123";
22
23 // =====
24 single in-memory sessions
25 // =====
26 const sessions = new Set();
27
28 function parseCookies(req) {
29   const out = {};
30   const raw = req.headers.cookie;
31   if (!raw) return out;
32   raw.split(";").forEach(part => {
```

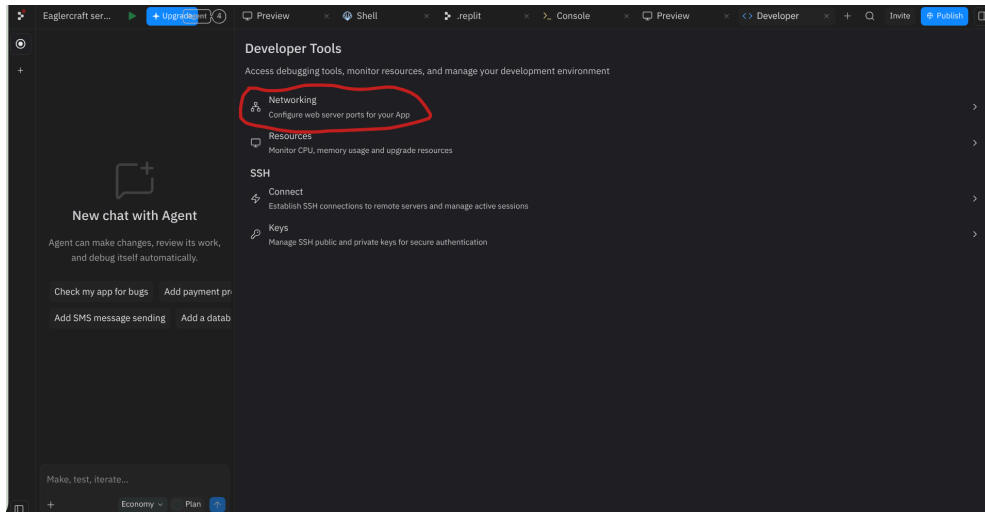

Now run the project

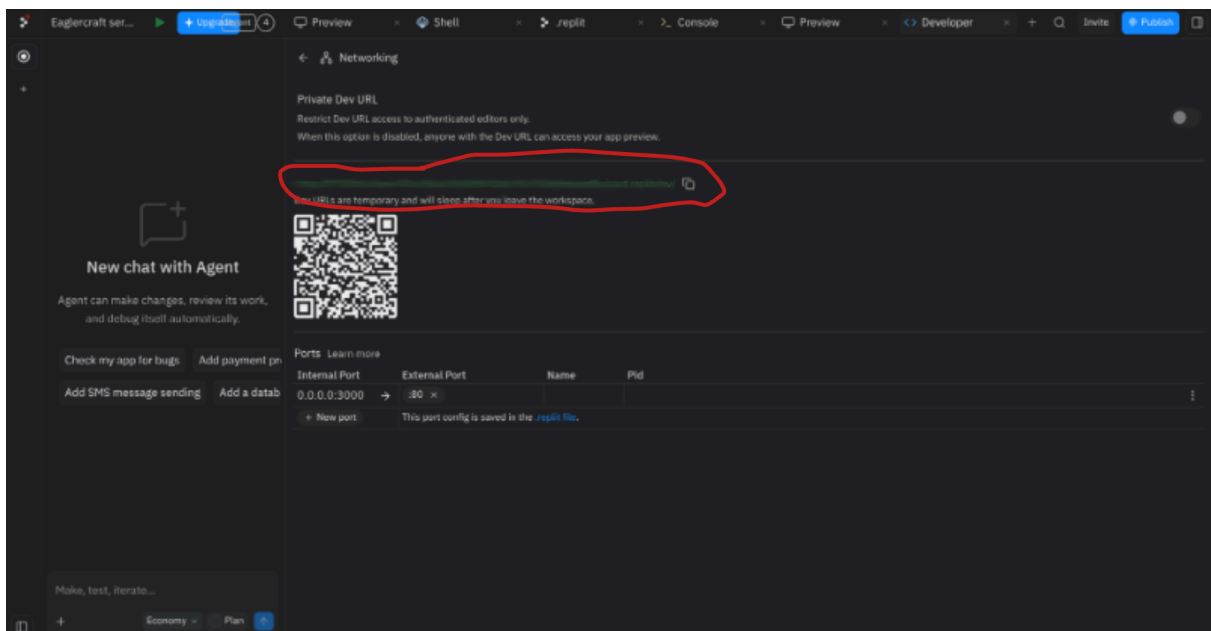

Search up developer by clicking new tab and select it

Choose networking

Press the link

Type in the password that you set, if you forget go back into index.js. Only you can access the code.
